

Título: CYTIVA: Innovation in protein research

Ponentes: Nerea Bernardo, Paula Braga

Abstract:

Cytiva is constantly bringing innovation into well-established techniques for protein research. In this seminar, we will discuss the newest solutions in the fields of chromatography and molecular imaging.

Discover all the applications that can be covered with our imagers: chemiluminescence, fluorescence, DNA gels, protein gels, etc. and become acquainted with the most recent assets that will help you with your daily Western Blots.

As the leading company in antibody purification, we continue to bring innovation to support your research in mAbs and antibody fragments. Get to know our novel resins and their applications in this field.

Let's discuss and learn together about protein purification and analysis, understanding both the science and the application.
