

Would you like to harness synthetic biology to study brain transport and create new systems for brain delivery?

The project and the team

Current treatments against brain diseases have very low efficacy due to the incapacity of most drugs to cross the blood-brain barrier (BBB) and target particular cell populations. In our group we are developing targeted delivery systems that transport biotherapeutics across the BBB.

We have recently been awarded a highly prestigious grant by the European Research Council to develop new strategies to deliver large therapeutics into the brain with unprecedented efficiency and selectivity. In your PhD project, you will be applying cellular and synthetic biology, as well as protein engineering, to study transcytosis at the BBB and create a paradigm-shifting system for brain delivery.

You'll be part of a young, dynamic, and international team at IQS Barcelona. We invite you to visit our website www.pptn.iqs.edu

We aim to contribute to pushing the boundaries of knowledge but our main goal is to grow and enjoy science together!

Your profile

- MSc degree or equivalent
- Background in biotechnology, cell/molecular biology, biochemistry, or related
- Experience in molecular biology and protein engineering will be valued
- Strong motivation, proactivity and creativity
- Good social skills to work in a team
- Excellent communication skills and fluency in English

Fellowship details

- Three years of funding with the potential of an extension
- Many training opportunities and space for creativity
- Expected starting date: May 2023

Applications are welcome until January 18th or until the candidate is found

Please send the following documents as a single pdf bearing your name to benjami.oller@iqs.url.edu :

- A motivation letter explaining your research experience, your main interests, and why you would be a good fit for this position
- Two reference letters and contact details of the referees who wrote them
- CV
- Academic record

Please submit your application email with "PhD SynBioBrain" in the subject line.

Would you like to generate smart antibody biotherapeutics targeting brain tumors?

The project and the team

Current treatments against brain tumors have very low efficacy due to the incapacity of most drugs to cross the blood-brain barrier (BBB) and to eliminate resistant cell populations.

In our group, we are developing efficient delivery systems to transport targeted nano- and bio-therapeutics across the BBB for the treatment of brain tumors. To support this challenging endeavor, we have recently received a highly prestigious grant from the European Research Council. In parallel, we are developing new strategies to render conditionally active antibodies capable of engaging targets previously considered undruggable. In your PhD project you will be applying antibody engineering and biorthogonal chemistry to create smart brain permeable antibodies.

You'll be part of a young, dynamic, and international team at IQS Barcelona! We invite you to visit our website www.pptn.iqs.edu

We aim to contribute to pushing the boundaries of knowledge but our main goal is to grow and enjoy science together!

Your profile

- MSc degree or equivalent
- Background in biotechnology, chemistry, pharmacy, or related
- Experience in protein engineering and some knowledge of chemistry will be valued
- Strong motivation, proactivity and creativity
- Good social skills to work in a team
- Excellent communication skills and fluency in English

Fellowship details

- Three years of funding with the potential of an extension
- Many training opportunities and space for creativity
- Expected starting date: February to May 2023

Applications are welcome until January 18th or until the candidate is found

Please send the following documents as a single pdf bearing your name to benjami.oller@iqs.url.edu :

- Motivation letter explaining your research experience, your main interests, and why you would be a good fit for this position
- Two reference letters and contact details of the referees who wrote them
- CV
- Academic record

Please submit your application email with "PhD Biotherapeutics" in the subject line.
